

# Hugo Peters GAME DEV, PROGRAMMER, DESIGNER

Learn more about these and other projects on my portfolio: https://hugo.fyi/

Professional Experience

Narrative Systems Programmer

Ubisoft / Massive Entertainment - Malmö, Sweden

April 2020 - Present

Designing, implementing and maintaining complex systems for AAA-game titles 'Avatar: Frontiers of Pandora', 'Star Wars Outlaws' and the Ubisoft-owned 'Snowdrop' engine.

# Junior Game Programmer

UBISOFT

Ubisoft / Massive Entertainment - Malmö, Sweden

Ubisoft / Massive Entertainment - Malmö, Sweden

September 2017 - December 2017

# University Projects

Bolt Storm - Gameplay Programming	NHTV University	October 2016 - August 2017
Student project, with around 25 team members. 12 programmers in toto	al. Using Unreal Engine 4.	
<ul> <li>Unreal Engine 4 source build to include Xbox One functionality</li> <li>Custom finite state machine in C++ with full Blueprints accessibility</li> <li>Implemented all player logic in C++ using the custom state machine</li> <li>Melee and ranged combat system in C++</li> <li>UI implementation &amp; design</li> </ul>	<ul> <li>Support to many technical iss</li> <li>Animation blending and inter</li> <li>Custom collision checking for</li> <li>Slot manager for mapping sk</li> <li>Aim-assist system with object</li> </ul>	rpolation features in C++ r fast paced combat <eleton sockets="" td="" to="" weapons<=""></eleton>
Soul Knight - Lead Programming	NHTV University	December 2015 - June 2016
Student project, with around 25 team members. 4 programmers in tota	l. Using Unreal Engine 4.	
<ul> <li>Implemented all gameplay mechanics and state machine in C++</li> <li>Free-roaming 3rd person camera in C++</li> <li>Optimisation for PlayStaion 4 using profiler and debugging solutions</li> <li>Level streaming framework in C++ on top of UE4's</li> <li>Gameplay mechanics using advanced engine features such as procedural meshes</li> </ul>	<ul> <li>Leadership over other programmers, managing tasks and deadlines</li> <li>Built Unreal Engine 4 from source to include PlayStation 4 functionality</li> <li>Animation systems through Blueprints and C++</li> <li>Light / fog blending based on triggers and splines</li> <li>Gameplay design for core mechanics</li> </ul>	
- Planned, keyframed, shot and edited the reveal teaser trailer		

July 2016 - Present

Game engine from scratch in C++, with custom C# build tools.

- Cross-platform support for Windows x86/x64, WebAssembly / Emscripten. DX11 / OpenGLES (emulated using Google ANGLE on Windows)

- Libraries/APIs used include: Bullet Physics, Emscripten, FBX SDK, hIslparser, mcpp (shader generation / preprocesser parsing), glsl-optimizer, NoesisGUI, dear imgui (stripped out in release mode), **OpenAL** (audio with plugin system that supports custom decoders like FluidSynth), **rapidjson**, **plf-colony** (used for storing things like entity components), **stb**, sdl (on Emscripten, OpenGL ES on Windows emulation), zlib

- Rendering is currently limited to forward rendering, using a PBR implementation based on Google's Filament renderer. Uses a custom baked light probe solution to achieve IBL. I have written a deferred renderer on top of the engine as well, but this is not mainline (integration of different rendering modes is pending..)

- Entirely modular, each module is a separate Visual Studio project, with dependency rules. Code has a module framework, with at least one module per "project"

- Build toolchain written in C#, features a module rules compiler (compiles module rules to single DLL, keeps tracks of changes etc.), custom incremental compilation, taskscheduler for compilation/linking tasks, very fast "nothing to do" detection, generation of engine version stamp, Visual Studio project generation)

### DirectX 11 Renderer

#### November 2015 - January 2016

Basic renderer using abstracted DirectX 11 API, supports Physically Based Rendering

- Basic implementation of render windows in Qt

- Input handling for keyboard and gamepad

- Went from Game Maker to C# to C++

- Physically Based Rendering

### The Runthrough

Music / rythm action-arcade game. Went through multiple redesigns / rewrites, now working on the final revision using my 'Warlock' engine.

- 'Track Development Tool' - slick level creator with backgrounds effects editor, music scrubbing, login / account / licensing system and more.

### Reverse Engineering / Porting 'Beyond: Two Souls'

I was asked to stop working on it by Quantic Dream...

- Reversed class system, type/id registration code
- Reversed Lua bytecode by making a converter for big/little endian
- Implemented a custom Lua framework for auto-generated game scripts
- Implemented custom class system with binary components
- Around 6 full rewrites of my 'port' from the ground up
- Most of the game playable on PC, with models, but no shaders :(

- Reversed and implemented sequences (camera shots, dialog, audio, script events, etc), audio streaming, model / vertex formats, GUI middleware "Menus Master", choice events / branching story, user actions, Lua function handlers, area / scene loading, videos, more? - Literally boots the game like a PS3 would, natively - not a remake

# EDUCATION

## 'International Game Architecture & Design'

NHTV Breda University of Applied Sciences, The Netherlands

September 2014 - June 2018

Bachelor of Science (BSc) - graduated cum laude

'Higher General Secondary Education' (HAVO)

The Netherlands

December 2011 - 2016

April 2014 - ?

2010 - 2014

### Dutch Game Awards 2017

Bolt Storm - Winner Best Student Technical Achievement

I designed and implemented most gameplay systems in the game, from player movement to combat, gameplay scripting, the game's tutorial and more. We were nominated alongside two other projects, from a total of 20 projects.

## Best Code in a Student Project

Bolt Storm won this award at our University, NHTV Breda University of Applied Sciences, in my 3rd year. There were 7 other projects eligible for these rewards.

### Dutch Game Awards 2016

Soul Knight - Nominee Best Student Game Design I was heavily involved in the design process of Soul Knight, designing most of the gameplay mechanics. We were nominated alongside two other projects, from a total of 25 projects.

### Unreal Engine Community Highlights Feature

Soul Knight was featured in the July edition of Epic Games' community highlights video.

### Best Code in a Student Project

Soul Knight won this award at our University, NHTV Breda University of Applied Sciences, in my 2nd year, as well as 'Best Art in a Student Project' and 'Best Game' after our first few months of development (after each 'block' awards were given). There were 16 other projects eligible for these rewards.
